[Back]
task 1 - sketch 1c

Task1-Sketch1

Walkthrough Summary
- clicked on the 'work tracker' button it took me to another page
- then entered my name is the textbox
- clicked on 'add date' button it got the current date
- clicked on 'start work' button it got the start time then clicked on the 'end work' button it got the end time
- clicked on the 'add to list' button nothing seems to happen, so I pressed the 'next' button to took me to another page and the information I entered on previous page is on the list with name, date and amount of time spend

Final assessment
Strengths: The user only must click buttons to set up the tracker. So, it is simple and quick to use.

Weakness: If the user presses the 'end work' before 'start work' it will mess up the amount of time. You must use this system and press 'start work' when you are starting your work and remember to come back and press the 'end work' button to record total amount time worked.

task 1 - sketch 2a

Name: [text]
Date: YYYY-mm-dd [Add date]
Hours, [00]:[00] to [00]:[00]
Worked
(in 24hr
format) [calculate hours]
[back] [add to list] [next]

task 1 - sketch 2b

Name	date	hours worked
Billy	2022-05-05	6 hr
Billy	2022-05-07	4 hr

[back]

task 1 - Sketch 2c
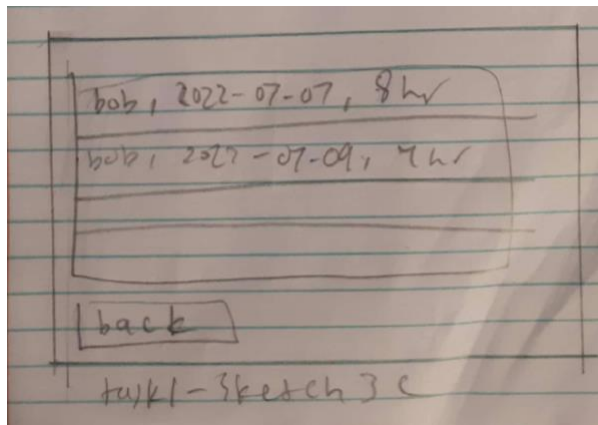

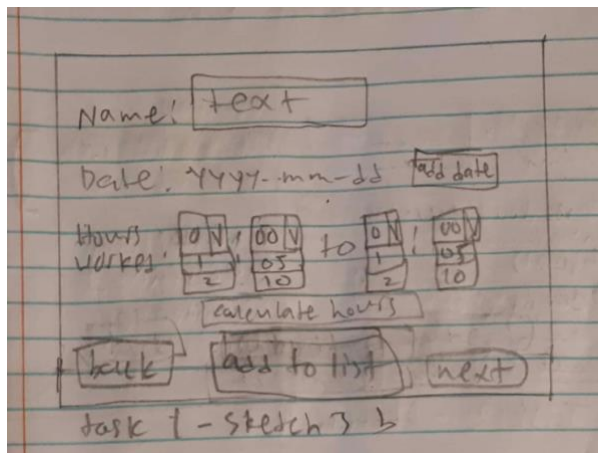

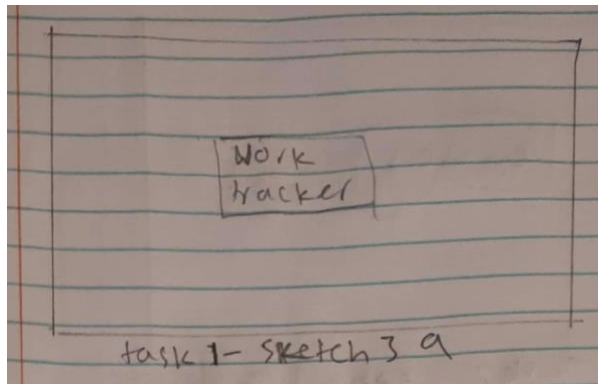

Task1-Sketch2

<u>Walkthrough Summary</u>
- clicked on the 'work tracker' button it took me to another page
- then entered my name is the textbox
- clicked on 'add date' button it got the current date
- entered two sets of time in 24 hr format assuming that is started to end work time
- pressed the 'calculate hours' button
- clicked on the 'add to list' button
- clicked on 'next' button it took me to a page where the name, dare and hour work is shown in some sort of list

<u>Final assessment</u>
Strengths: It is quick and simple to use. You can enter the start and end time at the same time.

Weakness: People might still enter in am/pm format, and it will mess up the calculation of amount of time.

Work
tracker

task 1 - sketch 3 a

Name: text

Date: yyyy-mm-dd [add date]

Hours
worked: [0 v] : [00 v] to [0 v] : [00 v]
         [1]   [05]   [1]   [05]
         [2]   [10]   [2]   [10]

[calculate hours]

[back] [add to list] (next)

task 1 - sketch 3 b

bob, 2022-07-07, 8 hr

bob, 2022-07-09, 4 hr
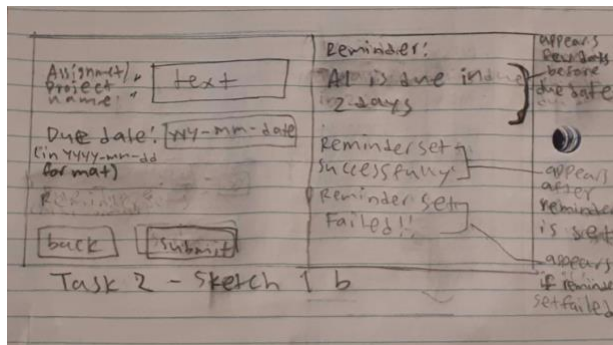

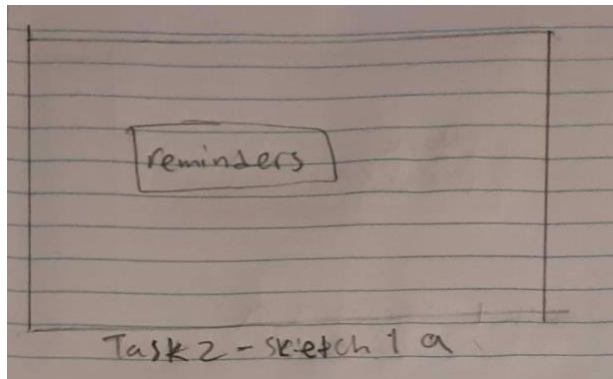

[back]

task1 - sketch 3 c

Task1-Sketch3

Walkthrough Summary
- clicked on the 'work tracker' button it took me to another page
- then entered my name is the textbox
- clicked on 'add date' button it got the current date
- from the drop down menu I picked two sets of time
- then pressed the 'calculate hours' button
- then pressed 'add to list' button
- then pressed the 'next' button my name, date and amount of time showed up in a list format

Final Assessment
Strengths: It is simple and quick to use. You just must select time here so you will not accidently enter am/pm time format.

Weakness: People might select the am/pm time thinking it is the right one. So, it will mess up the calculation.
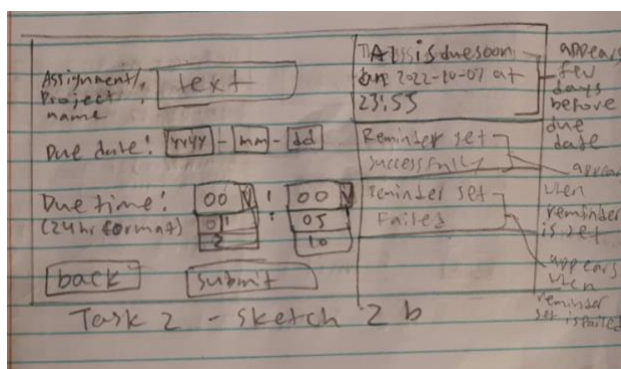

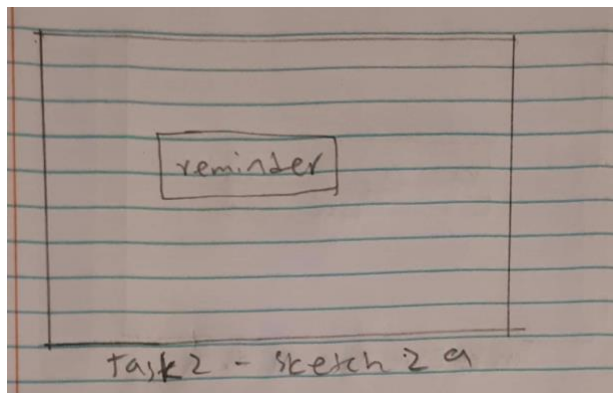

Task2-Sketch1
<u>Walkthrough Summary</u>
- clicked on the 'reminder' button it took me to another page
- then entered my assignment name in the text box
- then entered the due date of assignment in another textbox
- pressed 'submit' button
- on the side got a message "Reminder set successfully"
- two days before due date of the assignment got a message "A1 is due in 2 days"

<u>Final Assessment</u>
Strengths: It is very easy to set up a reminder. It will also give a message of what assignment is due 2 days before the due date.

Weakness: It does not have a due date time to let the user know what time it is due at.

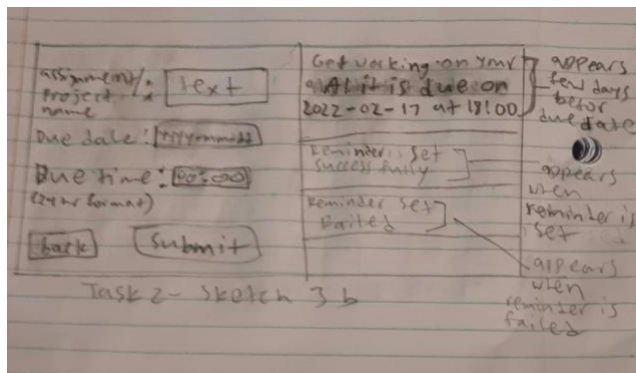

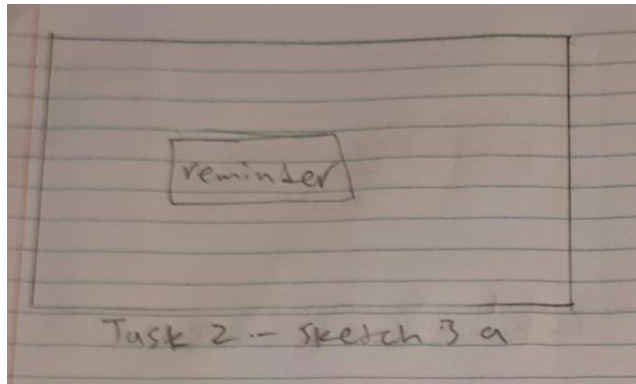

Task2-Sketch2
<u>Walkthrough Summary</u>
- clicked on the 'reminder' button it took me to another page
- then entered my project name in the text box
- then entered due date of the project in separate text boxes
- selected the time when project the due from a drop down menu
- then pressed 'submit' button
- on the side got a message "Reminder set successfully"
- two days before due date of the project got a message "A1 is due soon on 2022-10-07 at 23:55"

<u>Final Assessment</u>
Strengths: It is simple to set up reminder. When the reminder pops up it tells the user what assignment, when it is due and the time it is due at in case the user forgot the due date and time.

Weakness: The user might not like to enter the date in 3 different text boxes. Also, the time is in 24 hr format so they might set up in am/pm format and that might make then hand the project early or late.

Task 2 – Sketch 3 a

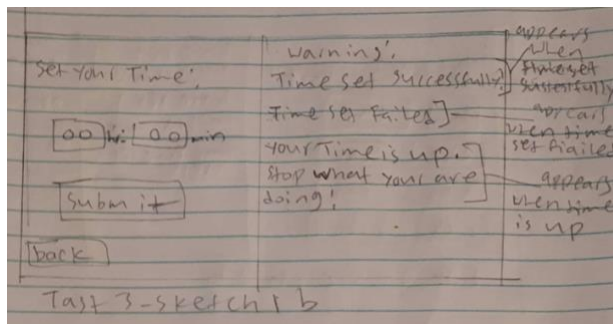

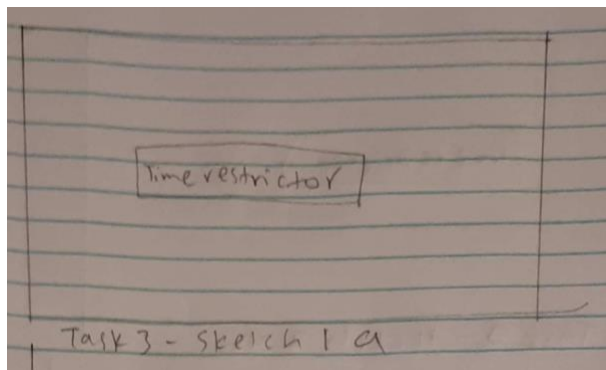

Task 2 – Sketch 3 b

Task2-Sketc3
<u>Walkthrough Summary</u>
- clicked on the 'reminder' button it took me to another page
- then entered my assignment name in the text box
- then entered the due date of assignment the next textbox
- entered the due date in a textbox in 24 hr format
- pressed 'submit' button
- on the side got a message "Reminder set successfully"
- two days before due date of the assignment got a message "Get working on your A1 it is due on 2022-02-17 at 18:00"

<u>Final Assessment</u>
Strength: It is simple to set up the reminder. When the reminder pops up it motivates the user to do their assignment and it gives the due the assignment name, date and when it is due.

Weakness: Some people might accidently put am/pm time format.

Task 3 – Sketch 1 a

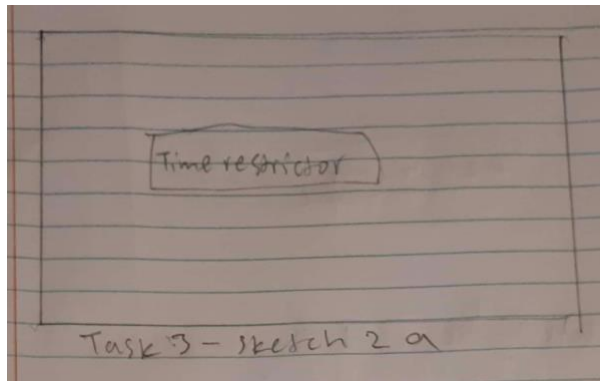

Task 3 – Sketch 1 b

Task3-Sketch1
<u>Walkthrough Summary</u>
- clicked on the 'time restrictor' button it took me to another page
- entered the amount I want into two text boxes
- pressed 'submit' button
- on the side got a message "Time set Successfully"
- when the time was up got a message "You time is up stop what you are doing!"

<u>Final Assessment</u>
Strength: It is very simple to set up the timer. At the end it gives a message when the time is up.

Weakness: people might think it is min and sec format, but it is in hr and min format.
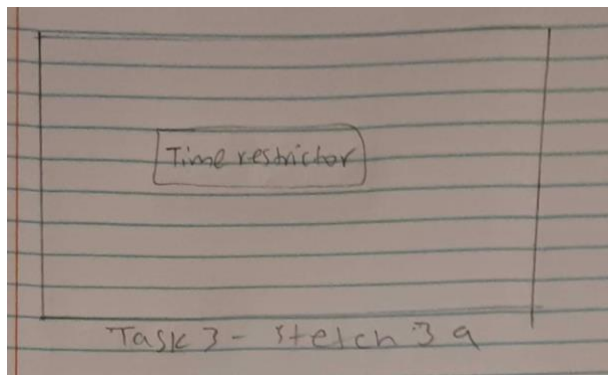

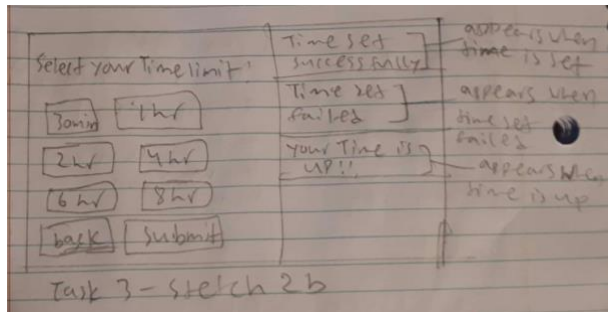

Task3-Sketch2
Walkthrough Summary
- clicked on the 'time restrictor' button it took me to another page
- clicked on the button on whatever time I want
- pressed the 'submit' button
- on the side got a message "Time set Successfully"
- when the time was up got a message "You time is up!"

Final Assessment
Strength: It is very simple to set up timer. Just by clicking 2 buttons it sets up the timer and gives a message when the time is up.

Weakness: People might press more than one button and never press 'submit' to get the timer started or they might press another time after pressing the submit and that will mess up the timer. There might not be a time that the user wants time for.

Task3-Sketch3
Walkthrough Summary
- clicked on the 'time restrictor' button it took me to another page
- selected the time I want to set from the drop down menu
- pressed 'submit'
- on the side got a message "Time set Successfully"
- when the time was up got a message "Stop what you are doing your time is up!"

Final Assessment
Strength: It is very simple to set up the timer. It gives you many options to set up your timer to and gives a message when the time is up.

Weakness: It might not have the option of the time the user wants to set the timer to.
